As a qualified talent nurturing workshop and accredited talent point we have taken up the task to diverse and complex activities of talent nurturing in both curricular and extracurricular frames. With our special framework and wide contact system we foster the nurturing of gifted students in workshop-like frames and intend to expand our activities on local,

regional and international levels, where students can participate in competitions for mathematics, literature, and e-learning projects. We would like to share our best practices to be able to learn and cooperate with other European Talent Points.

As an exam centre for Deutsches Sprachdiplom B2/C1 we aim to strengthen the effective preparation of our students for this language exam. Our exchange programme with the Grammar School of Damme (Germany) and the projects between German and Hungarian students will assist in motivating for intense language learning and these bilateral projects can also be used in the future to identify gifted students in different areas of sciences and arts while

German and Hungarian students work together.

We intend to continue our participation in JDI (International Debate Competition for Youngsters). In this international programme every year we have reached outstanding results, although we are not a bilingual German school.

The educators in our school have recently taken part in diverse conferences related to different areas of education:

Modern Magyar Pedagógiai Konferencia
(Conference of Modern Hungarian

Pedagogy), Digitális Pedagógus Konferencia (Conference for Digital Pedagogy) Kreativitás és Tehetség (International Conference for Creativity and Talent). We have also organized the Meeting for Hungarian Practice Schools this year.

In order to nurture and further develop gifted students we offer study groups and individual lessons in an extracurricular frame. The areas range from music, playing instruments, choir, folk music to volleyball. Thus the main areas in talent nurturing are natural sciences, foreign languages and sports. In the following areas our students reached outstanding results: Hungarian Competition for High School students in Physics: 2nd place, Hungarian Competition for High School students in German as a Foreign

Language: 9th place, National Competition for Geography: 1st place.

Our choir and soloists are often invited to local and national cultural events and perform with a huge success.

In the future we are dedicated to organize workshops to share our knowledge and experiences in the fields of creativity and the use of digital media in education. We plan to provide parents with a guideline about how to identify talents.

Collaboration Hub

Furthermore we would like to support the participation of our gifted students in sports, art and other subject related competitions and also want to find possibilities to cooperate with other European Talent Points.

Each member of our teaching staff is committed to support and nurture gifted students. Thus we are planning to broaden our international relationships to enrich each other with multicultural perspectives about different aspects of the topic of talent.

Our supporters: Kodály Center, House of Civil Communities in Pécs, Pannon Klass Community, Harmadik Színház , Janus University Theatre, Goethe Institute, Confucius Institute, Lenau Haus.

Our goal is to be able to cooperate more actively with other Talent Points / Centers and we are open to welcome experts, representatives and gifted students from all over Europe in our school.
